Design: Virtual Assembly Program

Equipment/ Software: Web Camera, Epson Projector, and ARtoolkit markers

Goal: I need the web camera for tracking purposes only. I want the projector to render the virtual 3D Model without video feedback from the web camera (NOT THE WEB CAMERA).

Output: Figure displays the current output I'm receiving; I'm getting feedback from both the Webcamera and projector.

Paths: I tried replacing *camera = ar.addWebCamera()* with *camera =   ar.addWebCamera(window=None*) and figure 2 is given as my output.
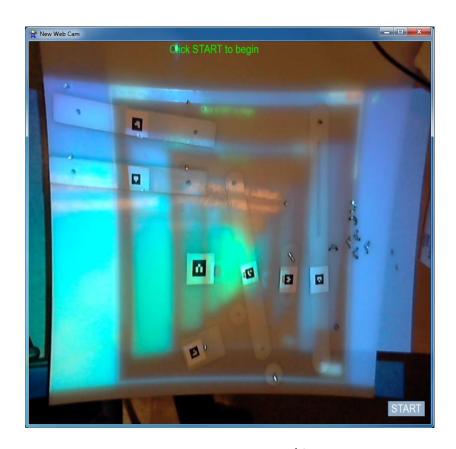

Program code is listed below!!!

FIGURE 1: Extended desktop w/ feedback
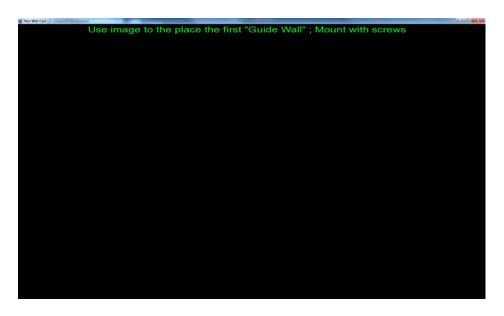

FIGURE 2: Function *camera =   ar.addWebCamera(window=None*)
